

# Hyperflow - Software Developer

At Hyperflow we develop enterprise tools for data structuring (creation of knowledge graphs from existing unstructured data) and data linking (link newly created knowledge graphs to existing ones, e.g. wikidata). Join us and help us build new methods and tools based on existing open source frameworks and libraries.

Send your CV to: [yamalight@gmail.com](mailto:yamalight@gmail.com)

(please make sure to include any [open source] projects you've worked on, if any)

## Your skills

- Solid knowledge of javascript
- Either experience with Node.js, or experience with front-end development
- Experience with testing (integration and e2e)

## Nice to have

- Experience with knowledge graphs is a big plus
- Experience with machine learning frameworks (and Python) is another big plus
- Experience with message queues
- Experience with MongoDB, Elasticsearch, Redis
- Experience with (one of the) following libraries:
  - React
  - Tailwind.css
  - GraphQL / graphql-compose
  - Fastify
  - Mongoose
- Linux server management / DevOps experience is a nice bonus

## What we offer

- Work on a brand new product in a growing start-up
- Work on / with open source software
- Join a remote-first team with flexible working hours
- Receive the Exist Business Start-up Grant (application in progress)
