**Front-End Developer (f/m/x) Internship**

As a team member, you will shape how tomorrow’s manufacturing companies operate. Our solution brings the decisive step into the age of the Economy of Things. This step is the development of a smart billing system for pay-per-use business models. Together, we will create an ecosystem of different players from several industries on the backbone of the industrial internet of things (IIoT). Doing so, we apply the most advanced technologies, such as distributed-ledger technology - well evaluated, and not only to show off!

At Synctive you will meet a highly motivated and ambitious team that works together on the challenges of the future! In addition to the technical start-up support provided by TecUP, our office in the Technologiepark (Paderborn, Germany) offers an attractive working environment.

**Tasks**

As a Front-End Developer, we offer you the opportunity to contribute your perspectives, share your ideas and bring your vision to the table. This role includes:

**Front-end & User Experience**

- You define and implement a web application with the development team.
- You are responsible for engineering a scalable, efficient, and clean codebase.
- You focus on the delivery of a beautiful, user-friendly front-end solution to match enterprise customer’s workflows.
- You need to learn about your customers and their associated personas to understand their needs and work practices.
- You will share new features and development updates with customers. Knowing German would be helpful but is not a must.

**Requirements**

**Hard skills**

- Experience with ReactJS and the React ecosystem.
- Experience with cloud-based web app development based on JavaScript and Test Automation Frameworks.
- Good understanding of RESTful Web Services design and implementation.
- You have already developed your own web apps that you could demonstrate to us.
- Ability to write clean, modular and reusable code.

**Soft skills**

- Customer-centric excellence: Customer is king! You always give 110% to impress users and customers of your programs.
- Responsibility, determination and attitude: To achieve our ambitious goals, we need a great deal of determination, hard work and the winning attitude.
- First things first: There’s a lot to accomplish, so you must prioritize. You know when to harvest low-hanging fruits and when to be a hard-as-nails perfectionist.

**Start date: 15th February 2021**  
(However, we are flexible if you want to start earlier.)

Something has moved in you after reading this ad? Well, then you are just the right person! We are very happy to get to know you.

**How to apply**

Visit [www.synctive.join.com](http://www.synctive.join.com) to apply or send us an email (albert.gorlick@synctive.de).

Convince us of your skills and take on our coding challenge. We will send you the link once we received your application.
